Name: _____

Saving Your Money Early

How much money can you save a week?

Decide how much you can save per week and do the math. See how much you could have saved by the end of 5th grade.

Directions:
Step 1: Decide how much you can save each week.
Step 2: Multiply how much you save each week by the number of weeks in a year.
    Example: $1 a week X 52 weeks = $52 a year
Step 3: Add up the money saved each year (Kindergarten – 5th grade) to get the total money saved by the end of your 5th grade year.
    Example: 52+52+52+52+52+52 or $52 X 6 = $312.00

Grade	Year Total
Kindergarten	$
1st Grade	$
2nd Grade	$
3rd Grade	$
4th Grade	$
5th Grade	$
Total	$

saved by the end of 5th grade!

There are about 52 weeks in a year.

I am saving $ _____ a week.

$_____ a week X 52 weeks = $_____
